Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 and 22-56, drawn to a nucleic acid encoding an insecticidal protein, a chimeric gene comprising the nucleic acid, plants, plant cells and seeds comprising the chimeric gene and a method of using it to make plants resistant to insects, classified in class 800, subclass 301.
- II. Claims 13-21, drawn to an insecticidal protein, classified in class 530, subclass 350.

The inventions are distinct, each from the other because of the following reasons:

The nucleic acids of Group I and the proteins of Group II are independent and distinct inventions. DNA and protein differ in composition, structure and function. Furthermore, the protein of the second invention could be made by a process other than the expression of the gene of the first invention, such as chemical synthesis or purification from the natural source, and the DNA of the first invention may be used for processes other than the production of protein, such as a nucleic acid hybridization assay.

Nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another, as are different proteins structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute **independent and distinct** inventions within the meaning of 35 U.S.C. 121. Each sequence requires an independent search of the sequence databases. Absent evidence to the contrary, each such sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq (see MPEP 803.04 and 2434).

Art Unit: 1638

Upon election of a Group, Applicant is additionally required to select a single nucleotide sequence or amino acid sequence, as appropriate, for said Group. This requirement is not to be construed as a requirement for an election of species, since each nucleotide and amino acid sequence is not a member of single genus of invention, but constitutes an independent and patentably distinct invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, fields of search, and classification, restriction for examination purposes as indicated is proper.

Applicant is advised that for the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
